Project

Title: Smart News Android Application

Objective: Smart News is an Android application that provides users with an easy and convenient way to access news articles from various sources. With a user-friendly interface, the app allows users to customize their news feed based on their interests and preferences.

One of the key features of Smart News is its ability to curate news articles from different sources and present them in a concise and easy-to-read format. The app uses an algorithm to analyze the user's reading habits and preferences, and then suggests relevant articles based on those preferences. This ensures that users are always up-to-date with the latest news that matters to them.
